

ZeroSpike One-Pager

The [ZeroSpike](#) project was initiated by the Italian civil society association [FRI](#), in order to find out more about the [toxic spike protein](#) and what can be done to eliminate it. In addition, the ZeroSpike research team published [over 2,000 pages of scientific documentation](#) explaining the SARS-CoV-2 virus, the covid-19 disease, the new mRNA vaccination technology and the toxic spike protein.

Once it became evident that spike protein is a very dangerous toxin and is at the origin of several pathological health conditions, ZeroSpike's interdisciplinary research team set out to find a remedy.

First, they discovered that the food supplement N-Acetylcysteine (NAC) has the capability to denature the spike protein, as explained in this [scientific article](#). NAC is a wonderful amino acid with [proven benefits](#) and plenty of [scientific evidence](#).

However, in vitro tests showed that the denaturation level of spike proteins by standard NAC was not sufficient (only 12%-15% on average). Thanks to special patented machinery using the principles of quantum physics, it was possible to increase the denaturation rate by "bringing more order to the subatomic level of the N-Acetylcysteine molecule," thereby optimising ("augmenting") the beneficial properties of NAC. The resulting supplement, called "Augmented NAC," was [found](#) to consistently denature spike proteins by over 99%.

[Augmented NAC](#) has also demonstrated [synergistic effect](#) when combined with other supplements. [In vitro tests](#) showed that Augmented NAC protects [vitamin C](#) from oxidation and [glutathione](#) from degradation at a much higher level.

Augmented NAC Testimonials

[Here](#) you can find the testimonials of doctors and people using Augmented NAC and sharing their experience in cases of long-Covid, vaccination injuries, *shedding*, and also general health, well-being and prevention practices.

ZeroSpike on social media

We share on a regular basis relevant content about spike protein, long-Covid, adverse events from Covid injections, Augmented NAC and other related topics via [Telegram Channel](#), [Twitter](#) and on the [ZeroSpike Blog](#).

Can this treatment bring hope to the abandoned vaccine victims?

By [Sally Beck](#) - June 29, 2023

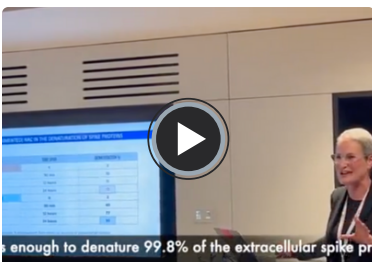

THE unprecedented range and extent of Covid vaccine injury is not open to argument. Yellow Card reporting, which the Medicine and Healthcare products Regulatory Agency say represents just 10 per cent of the true number of reactions, reveals that medical staff and victims have reported half a million adverse events and nearly 2,600 fatalities.

The most common issues following vaccination are low blood platelets (immune thrombocytopenia), heart inflammation (myocarditis), blood clots in the body and brain, (thrombosis and cerebral venous thrombosis) and Guillain-Barré syndrome, where the body attacks its nerves and can cause paralysis.

More than one thousand [peer-reviewed](#) research papers have documented and explained the connection between injury and the novel Covid gene therapy; 228 of those papers involve myocarditis, 150 thrombosis, 116 thrombocytopenia, 61 cerebral venous thrombosis, and 43 Guillain-Barré syndrome.
